in this comprehensive treatment of infant perception philip kellman and martha arterberry bring together work at multiple levels to produce a new picture of perception s origins

this book makes the extremely complex process of architectural perception far more transparent and thus contributes to a better understanding of our built

environment why is there so much debate about the appearance of our built environment about the aesthetics of architecture today why do opinions about the aesthetic quality of buildings often diverge extremely even among experts why can't we agree on architecture on what is beautiful and what is not most areas of construction such as statics and building physics are measurable and can therefore be substantiated with objective arguments yet this does not apply to the unquantifiable aesthetics of architecture accordingly judgments on aesthetics are always subject specific and strongly dependent on the viewer nevertheless the aesthetics of architecture is not just a matter of taste many relationships between buildings as objects and viewers as subjects can be determined objectively with the help of perceptual psychology and information theory as this book demonstrates

in a major contribution to the theory of perception a d smith presents a truly

original defense of direct realism the view that in perception we are directly aware of things in a physical world it offers two arguments against direct realism one concerning illusion and one concerning hallucination that up to now no theory of perception could adequately rebut at the heart of Smith's theory is a new way of drawing the distinction between perception and sensation alone with an unusual treatment of the nature of object of hallucination

the present volume endeavors to make a contribution to contemporary whitehead studies by clarifying his axiological process metaphysics including his theory of values concept of aesthetic experience and doctrine of beauty along with his philosophy of art literature and poetry moreover it establishes an east west dialogue focusing on how alfred north whitehead s process aesthetics can be clarified by the traditional japanese buddhist sense of evanescent beauty as this east west dialogue unfolds it is shown that there are many striking points of convergence between whitehead s process aesthetics and the traditional japanese sense of beauty however the work especially focuses on two of whitehead s aesthetic categories including the penumbral beauty of darkness and the tragic beauty of perishability while further demonstrating parallels with the two japanese aesthetic categories of yûgen and aware it is clarified how both whitehead and the japanese tradition have articulated a poetics of evanescence that celebrates the transience of aesthetic experience and the ephemerality of beauty finally it is argued that both whitehead and japanese tradition develop an aesthetics of beauty as perishability culminating in a religio aesthetic vision of tragic beauty and its reconciliation in the supreme ecstasy of peace or nirvana

the philosophical issues raised by perception make it one of the central topics in the philosophical tradition debate about the nature of perceptual knowledge and the objects of perception comprises a thread that runs through the history of philosophy in some historical periods the major issues have been predominantly epistemological and related to scepticism but an adequate understanding of perception is important more widely especially for metaphysics and the philosophy of mind for this reason barry maund provides an account of the major issues in the philosophy of perception that highlights the importance of a good theory of perception in a range of philosophical fields while also seeking to be sensitive to the historical dimension of the subject the work presents chapters on forms of natural realism theories of perceptual experience representationalism the argument from illusion phenomenological senses types of perceptual content the representationalist intentionalist thesis and adverbialist accounts of perceptual experience the ideas of among others austin dretske heidegger millikan putnam and robinson are considered and the reader is given a philosophical framework within which to consider the issues

questions about perception remain some of the most difficult and insoluble in both epistemology and in the philosophy of mind this controversial but highly accessible introduction to the area explores the philosophical importance of those questions by re examining what had until recent times been the most popular theory of perception the sense datum theory howard robinson surveys

the history of the arguments for and against the theory from descartes to husserl he then shows that the objections to the theory particularly wittgenstein's attack on privacy and those of the physicalists have been unsuccessful he argues that we should return to the theory sense data in order to understand perception in doing so he seeks to overturn a consensus that has dominated the philosophy of perception for nearly half a century
